Useful Questionnaire:

Cabinets:

- Do you have any chemicals or dangerous products ?
- If so, which quantity of each chemical's family (flammable, toxic, corrosive) ?
- How do you currently store them ?
- How much free room do you have ?
- Do users complain about smellings ?
- If so, would a filtration air box needed for the cabinet ?

Safety showers:

- Where will the equipment be installed? outdoor or indoor ?
- Which operating mode would you prefer: With hand, foot or both ?
- Do you need wall or pedestal mounted ?
- What kind of material would you need (ABS, galvanised steel, stainless steel) ?

To find the right cabinet or shower for your needs, please ask Ecosafe or your usual reseller for advices.

Indication on Regulations:

FM : Ofers worldwide industrial and commercial product certification and testing services throught its business unit FM Approuvals. recognized and respected across the globe, FM approvals certification assures customers that a product has been objectively tested and conforms to the highest national standards. The FM certification requires a fire-resistance of 10 minutes for Safety Cabinets, according to the heating curve NFPA 251-1969.

EN 14470-1 : it is applicable for storage of flammable and highly flammable chemicals in a laboratory. The flammables used in laboratories must be stored in one or several safety cabinets wich are fire resistant 15 (minimum required), 30, 60 or 90 minutes.

EN 15154-1/2 : This regulation concerns first aid equipment and especially body showers and eye-washers, connected to water network.

ISO 7010/3864 : (relates to the labelling affixed to the safety cabinet) : The ISO 7010 prescribes the safety signs to be used in the context of accident prevention, fire fighting and information on the risks of health's damages. the shape and color of each safety signs and the design of the graphic symbols conform to ISO 3864.
